Características ampliadas

Fixed loading ramp manufactured in Spain

The standard loading ramp has a maximum load capacity of 10 tons, with the ramp length being 12m and 2m wide, with a drop of 1.48m (slope of 7^º or 12%).

Equipped with guardrails in UPN 80mm along the ramp, as well as on the loading platform. And 2 hydraulic cylinders and manual switchboard for lifting.

The tilting platform is 3'5m long and 2.5'm wide. Ideal ramp for loading and unloading trucks.

It is built with longitudinal beams to avoid undulations in it (avoids steering problems and wheel wear on the forklift). Finished and painted with a layer of primer and another enamel.

With CE conformity certificate and instruction book.

Possibility of custom manufacturing.

The price does not include VAT or transport.
