Plataforma basculante (m)	3,5 de largo por 2,5 de alto
Carga máxima de rampa (kg)	10.000
Normativa	CE

Características ampliadas

Mobile loading ramp

The loading ramp is constructed with longitudinal beams to avoid undulations in it (avoid steering problems and wheel wear on the forklift). Its length is 12m.

High quality ramp for loading trucks, manufactured in Spain, with a maximum load of 10 tons. Ramp of rise of 12m by 2m wide, with a drop of 1'48m (slope of 7º or 12%).

Equipped with tread and reinforced bottom toe, with 10mm support plate, 10mm sheet reinforcements and 6: 8mm top plate.

Protection railings in UPN 80mm along the rise ramp, as well as on the loading platform. Tilting platform 3'5m long by 2'5m wide.

Mobile ramp with 2 fixed Ø300mm wheels adapted to front support posts, for transport (without lifting system). Finished and painted with a layer of primer and another of enamel.

Certificate of conformity: CE and instruction book.

Transport with any open box truck (2.5m wide and 12m long) and easy assembly following the instructions.

The indicated price does not include VAT, transportation and assembly.

Possibility of manufacturing to measure, You can add power switchboard with dashboard, contact us
