

## Collision Detection System

ref. A501010004

Avoid material and personal damage in dead corners or corners with this collision detection system.

Installed in a corner where there is a danger of collision, it detects obstacles approaching 50 meters and launches an acoustic signal to warn both parties that there is another obstacle approaching around the corner.

**539,00 € tax excluded**

### Características principales

Descripción	Avisador acústico anti colisiones
Capacidad (kg)	50 metros de alcance

### Características ampliadas

Avoid material and personal damage in dead corners or corners with this collision detection system.

Installed in a corner where there is a danger of collision, it detects obstacles approaching 50 meters and launches an acoustic signal to warn both parties that there is another obstacle approaching around the corner.

This anti-collision equipment is equipped with passive infrared motion sensors that emit a flash signal when motion in the blind angle is detected in both parts of the device. This prevents accidents and property damage and, even more important, personal injury.

This device is very robust and resistant, manufactured to withstand the conditions in an industrial building.

### CHARACTERISTICS

- Clearly visible LED light with a long range.
- The LED light only activates when movement is detected in both parts of the device.
- Each unit is equipped with long-lasting alkaline batteries and low battery indicator.
- Compact, lightweight and ready to use.
- Easy installation through magnets.
- The battery has a lifespan of about 7 years (depending on its use).
