Características ampliadas

Anti-collision system active maneuver for forklifts and industrial vehicles that detects possible obstacles of range of action of forklifts -IP65

- Alerts the user of any situation of imminent danger through specific color codes, and only an acoustic signal is heard in case of imminent collision
- The system slows down automatically and prevents the movement of the forklift
- A compact design allows the sensor to be easily placed on the back of the truck while the screen is conveniently placed in the cab in front of the engine
- 12-36 V max
