

3 Rails Column Protector

ref. A501010011

Protect your ship's columns with this novel solution. A-Safe column protectors are specially designed to absorb and dissipate impacts, avoiding damage to vehicles, facilities, and even the same protection systems.

Its resistance prevents accidents and withstands and deflects the force of impact without creating any damage to any element.

0,00 € tax excluded

Características principales

Descripción	Protector columna de 3 raíles
Capacidad (kg)	Impacto: 5.000-33.000 Jul

Características ampliadas

to provide customized protection of columns, supports and structures of buildings of any size and shape: square, rectangular, circular or irregular.

This impact-resistant barrier system provides visual guidance to drivers and a powerful physical shield for vulnerable structures. The bars are separated from the column to absorb the collision forces and isolate them away from the posts.

With a fully modular and adaptable design, the barriers can also be supplied in units of two or three sides to protect the columns located in the corner of two walls or in front of the walls.

Thanks to the elasticity of the MEMAPLEX material, the bollards absorb the impact avoiding damage to the vehicles, the ground (which is almost always damaged due to damage to the metal safety elements) and to the same bollard, which results with 0% damage.

Save maintenance costs thanks to A-SAFE. If there is no damage due to accidents, there are no repair costs. Thanks to A-SAFE it is possible to save up to 90% on maintenance of both the facilities, vehicles and the safety material itself, since the MEMAPLEX material is hardly maintenance.
