

Height Restrictor for Doors

ref. A501010013

Protect the steps of doors and channels of roller blinds from machinery knocks by restricting the height with this innovative restrictor system.

MEMAPLEX material absorbs shocks leaving intact both building elements and vehicles and saving more than 85% in repair and maintenance costs.

0,00 € tax excluded

Características ampliadas

Designed to protect the edges of the doors and avoid damage in height due to the impacts of the vehicle.

Height restrictors offer guidance and physical protection against side and height collisions, protecting infrastructure. They prevent vehicles and loads from colliding with door frames and roller shutter channels, avoiding costly damage.

Where there is a risk of collision with elevated bridges, cable ducts, air, gas or ventilation; Height restrictors will avoid damaging and expensive damage, and warn the driver that your vehicle or cargo is too high.

Thanks to the elasticity of the MEMAPLEX material, the bollards absorb the impact avoiding damage to the vehicles, the ground (which is almost always damaged due to damage to the metal safety elements) and to the same bollard, which results with 0% damage.

Save maintenance costs thanks to A-SAFE. If there is no damage due to accidents, there are no repair costs. Thanks to A-SAFE it is possible to save up to 90% on maintenance of both the facilities, vehicles and the safety material itself, since the MEMAPLEX material is hardly maintenance.
