

## Industrial Protection Bollard 210x1200mm

ref. A501010043

A-SAFE Bollards are a multifunctional product that is widely used in industrial, commercial and public environments.

Designed to protect buildings and equipment from impact damage and provide a marked physical delimitation to prevent access or guidance to vehicles and pedestrians.

Its resistance is key to avoid accidents and withstand impacts up to 6000kg machines.

**0,00 € tax excluded**

### Características principales

Altura (mm)	835mm
Diámetro (mm)	190
Descripción	Bolardo de seguridad
Capacidad (kg)	Impacto: 6.900 Jul.

### Características ampliadas

A-SAFE bolts, strong, durable and highly visible, keep drivers on track for safe driving and can also serve as a guide along the route.

Thanks to the elasticity of the MEMAPLEX material, the bollards absorb the impact avoiding damage to the vehicles, the ground (which is almost always damaged due to damage to the metal safety elements) and to the same bollard, which results with 0% damage.

Save maintenance costs thanks to A-SAFE. If there is no damage due to accidents, there are no repair costs. Thanks to A-SAFE it is possible to save up to 90% on maintenance of both the facilities, vehicles and the safety material itself, since the MEMAPLEX material is hardly maintenance.
