Características ampliadas

Fixed loading ramp for trucks of 10 meters and up to a maximum of 12 tons. Robust and resistant construction. It has a width of 2.2 meters and is adjustable in height by means of a crank (from 1.1m to 1.45m). Includes side railing-curb and gray paint on structure and pavement.

It is an effective solution when there is no elevated loading dock, to be able to unload from trucks.

Fixed and transportable models (with wheel) with forklift available with option of manual or automatic lifting.

Made of IPE beams and sheet steel pavement in the flat area and at the start ramp and non-slip tramex pavement in the ramp area.

These ramps are manufactured following all the standards and safety directives and have CE MARKING, which will be sent with the ramp.

The standard price includes:

- The lifting mechanism of the loading platform with crank.
- Coat of gray paint on the structure and pavement.
- Side railing-curb.
- Platform mounted and truck loading.

OPTIONAL

- Anti-slip Tramex.

- Central wheels.
- Rotating mechanism for movement.
