Características principales

Características ampliadas

Hydraulic bucket on steel pallet forks, very resistant for forklift trucks. Ideal for transporting all kinds of materials. Available in more capacities, from 0.31 cubic meters to 2.50 cubic meters.

Contact us for a detailed budget.

FEATURES

5mm thick steel saucepan.

2 40/70 cylinders (except 250 liters = 1 cylinder) integrated into the chassis for optimal protection.

Hydraulic device for 60 ° inclination.

2 hydraulic couplings.

Operation: with a single double effect, the clamp is opened and unloads by lifting the bucket with the hydraulic bucket bottle.

Simultaneous movement in which at the same time the clip is opened and the bucket turns and closes the clip, so that the bucket is placed in a normal position.

OPTIONAL

Helps multi-coupling hydraulic coupling in 3/8 (complete set)

Helps the hydraulic coupling multi-coupling male plate in 3/8 (supplementary accessory).

Helps the hydraulic coupling multi-coupling female plate in 3/8 (supplementary accessory)

Against reversible screwed blade 500HB 150x15 (the meter).

Against reversible screwed blade 500HB 150x16, the metrolineal.

Hydraulic installation kit for second forklift.
